### **Tampon print**

A template of the logo is made and filled with the desired colour of ink. Then the colour is transferred directly onto the article with a silicone pad. As this pad is made of flexible silicone, almost all surfaces can be printed – including uneven surfaces.

### **Transfer print**

A heat press, consisting of a heating plate and base plate, is used to apply the logo / picture / text, pre-printed on thermal paper, onto the item. Beforehand, the thermal paper was imprinted through silkscreen or direct print.

### **Silkscreen print/ Textile printing**

For silkscreen print, a screen is made impermeable in areas not to be printed through a photochemical process. The promotional item is placed under the screen and printed on the areas where the screen is permeable. The colour is pushed through the holes and applied to the product. This method is ideal for flat surfaces, such as textiles or segments of umbrellas.

### **Laser engraving**

A method using a laser beam to engrave a logo into nearly any material. A computer-controlled process ensures a pinpoint reproduction. The final result always depends on the material surface. A colour replica is not possible.

### **Digital transfer**

Digital transfer works in two steps. First, a special thermo paper is imprinted digitally (see passage „direct print“) and cut to size. In a second step, the logo / picture / text is then printed onto the product under pressure in a heat press.

### **Direct print**

Using digital print, you receive long lasting, vibrant colours. Items of many different materials and sizes can be branded individually. The big advantage: Apart from the handling charges, the printing cost merely depends on the size of your logo, independent of the number of colours.

### **Doming**

The doming sticker is made of synthetic resin and a sticker with the company logo. The clear resin is fitted precisely to the logo print, protects the print, and gives the logo a 3D effect. The convex sticker is perfect for advertising on rough or hard materials, such as an umbrella handle.

### **Embroidery**

A digitally controlled process in which a computer steers a needle and thread to embroider a surface. As many as 10 colours can be used in one embroidery procedure. This robust form of refinement can be used on all textiles. The logo must be provided in order to determine the number of stitches and perform an accurate cost calculation.

### **Reflective transfer**

Reflective transfer is a type of thermal transfer in which a design (e.g. a logo) is printed on a special reflective foil and then ironed onto a material (for example, on umbrella, cap, or backpack). The reflective effect “transfers” to any Pantone colour.

The prices shown for printing are prices for a one colour imprint on one position (incl. handling) in our recommended printing technique and size. Set-up costs have to be added. The indicated prices are approximate and depend on the quantity ordered. For additional and bigger print options, please do not hesitate to contact us.

# 360° UV PRINTING

360° UV printing is a technology that utilizes special UV-curable inks. As a result, the prints are extremely durable and resistant to abrasion, water, and sunlight. Additionally, the colours are vibrant and vivid, and the print itself has a smooth and glossy finish.

## ADVANTAGES OF 360° UV PRINTING:

### FULL 360° ROTATION

Printing on the entire circumference of an object without any limitations.

### HIGH QUALITY AND DURABILITY

Prints are resistant to abrasion, water, and sunlight.

### VIBRANT AND VIVID COLOURS

CMYK colour space provides stunning results. Print your design without any colour limitations!

### VERSATILITY IN MATERIALS

360° UV printing can be applied to various materials such as plastic, metal, glass, and ceramics.

### FAST THROUGHPUT TIME

# 360° SILKSCREEN PRINTING

360° screen printing is a traditional printing process performed on round and cylindrical objects. To apply the print, the machine pushes paint through the mesh with an exposed pattern while the object rotates.

## WHY IT'S WORTH CHOOSING:

- maximum imprint field
- possibility to place additional decorations besides your logo
- precision and print quality
- high durability

# 360° ENGRAVING

360° is a classic engraving process, which thanks to special rotary overlays is performed over the entire surface of the cylindrical product. After the logo is applied, the product looks as if it was designed together with the print.

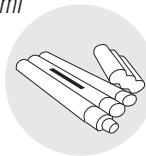

## WHY IT'S WORTH CHOOSING:

- maximum imprint field
- possibility to place additional decorations besides your logo
- personalisation from 1 piece
- high durability
